

DUO-THERM® COMFORT CONTROL CENTER

Comfort and control come together in the Duo-Therm Comfort Control Center. This electronic, digital system provides zoned climate control for as many as four areas within the coach – all from a digital control panel. It's ideal for multi-room and slide-out floor plan configurations.

Eliminate Multiple Thermostats

The SureTouch control panel operates rooftop air conditioners, single and dual basement air, heat pump systems, gas furnaces and electric heat strips – in any combination. Plus, the system allows for different temperature settings for each heating or cooling unit, if desired.

Engineered for Superior Performance

Comfort Control communicates through standard phone cables, making installation simple and cost-effective. A small remote sensor installed in each designated heating/cooling zone provides constant feedback to maintain desired temperature. The sensor works from anywhere within the zone. Adding to the control, an AGS system monitors the power supply and demand and automatically starts the on-board generator, if needed.

Comfort Control Center Features

Applications

Motorhomes • Fifth wheels • Travel trailers

Versatile Applications

Intelliset™ Smart Technology makes setting changes simple. Plus, internal memory retains all the settings, eliminating the need to reprogram the system after a power outage. The Comfort Control Center works with all Duo-Therm air conditioners and heat pumps plus accompanying furnaces in all sizes and types of RVs.

Engineered for Superior Performance

Zoned climate control means the system controls heating and cooling for up to four areas within the coach from one digital control panel.

SureTouch control panel allows operation of rooftop air conditioners, single and dual basement air, heat pump systems, gas furnaces and electric heat strips.

AGS system automatically starts the generator if the power supply or demand changes significantly.

Standard phone cables deliver all Comfort Control communications, making installation simple and cost-effective.

Digital LCD display provides readouts in Fahrenheit or Celsius.

Remote sensor installed in each designated heating/cooling zone provides constant feedback to maintain the desired temperature.
